

Rakuli Veriam

Backend Developer

Professional Summary

Backend developer with 3 years of experience specializing in the construction of robust REST APIs and scalable data services. Demonstrated expertise in Python and Java environments, with a strong foundation in microservices architecture. Actively expanding technical breadth through machine learning side projects, focusing on data processing and classification models.

Technical Skills

Category	Skills
Languages	Python, Java, SQL
Frameworks & APIs	FastAPI, Flask, RESTful Services
Databases	PostgreSQL, MongoDB, Redis
DevOps & Tools	Docker, AWS, Linux, Git
Machine Learning	scikit-learn, pandas, numpy

Professional Experience

Backend Developer

📍 Place | 📅 Date – Present

- Engineered and maintained microservices using Python and Java for a high-traffic fintech platform, ensuring high availability and performance.
- Designed and implemented REST APIs with FastAPI, optimizing data flow and integration with PostgreSQL databases.
- Collaborated with cross-functional teams to deploy containerized applications using Docker on AWS infrastructure.
- Streamlined data retrieval processes by implementing caching layers with Redis, reducing latency for critical financial services.

Projects

Spam Detection Classifier

- Developed a machine learning model using **scikit-learn** to classify and filter spam content.
- Utilized **pandas** and **numpy** for comprehensive data preprocessing and feature engineering.
- Implemented text vectorization techniques to enhance model accuracy during side project development.
